MICROSOFT EXCEL

Using Find & Replace

2

Introduction
To find content
To replace cell content
Practice

³ Introduction

When working with a lot of data in Excel, it can be difficult and time consuming to locate specific information. You can easily search your workbook using the **Find** feature, which also allows you to modify content using the **Replace** feature.

In our example, we'll use the Find command to locate a specific department in this list.

1. From the Home tab, click the Find and Select command, then select Find from the drop-down menu.

⁵ Finding content

- 2. The **Find and Replace** dialog box will appear. Enter the **content** you want to find. In our example, we'll type the department's name.
- Click Find Next. If the content is found, the cell containing that content will be selected.

At times, you may discover that you've repeatedly made a mistake throughout your workbook (such as misspelling someone's name) or that you need to exchange a particular word or phrase for another. You can use Excel's Find and Replace feature to make quick revisions. In our example, we'll use Find and Replace to correct a list of department names.

From the **Home** tab, click the **Find and Select** command, then select **Replace** from the dropdown menu.

- 2. The **Find and Replace** dialog box will appear. Type the text you want to find in the **Find what:** field.
- 3. Type the text you want to replace it with in the Replace with: field, then click Find Next.

Find and Repla	ace			?	×

- 4. If the content is found, the cell containing that content will be **selected**.
- 5. **Review** the text to make sure you want to replace it.
- 6. If you want to replace it, select one of the **replace** options. Choosing **Replace** will replace individual instances, while **Replace All** will replace every instance of the text throughout the workbook. In our example, we'll choose this option to save time.

4	Department	First Name	Last Name	Username	Part 1	Part 2	Part

18							Contraction of the

Generally, it's best to avoid using **Replace All** because it doesn't give you the option of skipping anything you don't want to change. You should only use this option if you're absolutely sure it won't replace anything you didn't intend it to.

¹⁶ Practice

Open our practice workbook.

- Click the Challenge tab in the bottom-left of the workbook.
- Crystal Lewis was married and changed her last name to Taylor. Use Find and Replace to change Crystal's last name from Lewis to Taylor. Be careful to only change Crystal's last name!
 - Find and replace **Bio** with **Biology**. Be careful **not** to change the major Biomedical Engineering!
- Use **Find and Replace All** to replace the **Physics** major to **Physical Science**.
